REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art neither discloses nor makes obvious the combination set forth in the claims by not disclosing an oil lubricant retaining bearing structure, where the oily bearing structure comprises an oily bearing having a central axis hole, a fan inserted therein, an internal-recycle oil-retaining system having an oil collection trench formed around an interior surface of the central axis hole, and in particular an acute angle oil-guiding ring edge located on each of two opposing ends of the oil collection trench, and two round inner recess trenches, one of the two round inner recess trenches being formed on each of two opposing ends of the oil collection trench adjacent to each acute angle oil-guiding ring edge. Furthermore, the internal-recycle oil-retaining system provides a reservoir for the lubricant.

Matsumoto (U.S. 6,196,802 B1) teaches a similar fan structure but does not contain an oil lubricant retaining bearing structure as claimed above.

Li (U.S. 6,848,830 B1) and Saneshige et al. (U.S. 5,145,266) both teach bearings usable with fans and with oil circulating bearing structures. The devices do not teach an acute angle oil-guiding ring edge located on each of two opposing ends of an oil collection trench, and two round inner recess trenches, and where one of the two round inner recess trenches being formed on each of two opposing ends of the oil collection trench adjacent to each acute angle oil-guiding ring edge. Furthermore the internal-recycle oil-retaining system provides a reservoir for the lubricant.
